

Cross-modal validation: snRNA vs orthogonal bulk

x = compartment-specific snRNA log2FC (CellBender, 95% CI); y = Hahn-2021 bulk log2FC.

Pre-locked joint rule, same ruler for all genes: class = snRNA(sig,dir) x bulk(sig,dir); shape = bulk padj<0.05; disconfirm defined dir
ADGRL2(CM) is the ONLY cross-modal sign-flip (snRNA up / bulk sig down) -> out of core. ADGRL1/3: bulk down but snRNA ns
